

Are you age 25-64 and diagnosed with autism spectrum disorder (ASD)?

Would you be willing to carry a Global Positioning System (GPS) tracker with you for 7 days to improve the understanding of community activities for adults with ASD?

Participate in a project that uses GPS technology and information on community activities to better understand how adults with ASD are integrated into the community, and receive a personalized community mapping profile.

Participation consists of three main components:

- 1) Completing 4 surveys (online or mailed)
- 2) One study visit to complete a survey and card sorting activity, and receive the GPS device
- 3) A second study visit to review the maps of your activities in the community

Compensation (\$70) provided.
